T8- Dissemination of catalogues

- D8.7 : Create a web-service between UKSSDC and the already existing IRAP propagation tool. This tool will provide access to the CME/CIR catalogues (from WP3 and WP5) and will offer an additional platform to help scientists access and manipulate catalogues developed in this project. Integrate the newly calibrated HI J-maps to the propagation tool. Including access to pre-generated time-elongation profiles for specific CMEs/CIRs or permitting users to extract profiles by clicking on J-maps. [month 36]
- D8.8 : Store the most accurate Carrington maps of solar wind speed at UKSSDC and integrate these maps in the IRAP propagation tool. Upon completion of the IRAP propagation tool, the interface will offer direct visualization of Carrington maps; integrating the Carrington maps calibrated in this proposal will be straightforward. [month 36]

CDPP: French data center for in situ plasma data: [CNES funded](#)

Scientific director: Vincent Génot

CDPP Tools:

AMDA:

- provides access to the CDPP data
- web-based data-mining tool (calculations, superposed epoch analysis, etc...)
- provides access to catalogues (e.g. CMEs (Wind/ACE))

3-D view:

- Orbital visualisation tool

TREPS:

- Coordinate transformation tool (e.g. transform GSE data into GSM data)

STORMS: Solar-Terrestrial ObseRvations and Modeling Service

Space-Weather Service recognised as a national service by CNRS (INSU)

Leader: Alexis Rouillard

CDPP/STORMS tools: [CNES funded](#)

Propagation Tool:

- idea formulated by IRAP for the HELIO project (deliverable), developped David Perez-Suarez
- CDPP propagation tool was funded by CNES, tool developped around exploiting HI J-maps

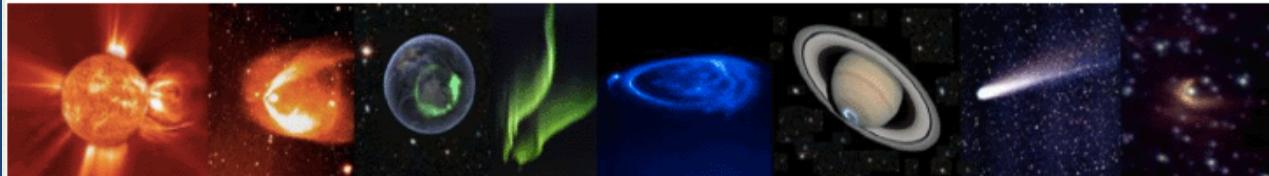

Space Weather Tool:

- Tool developped around Kunkel-Chen theory of CME eruption and propagation (magnetically-driven acceleration).

Welcome to CDPP

The CDPP (Centre de Données de la Physique des Plasmas) was created in 1998 jointly by [CNES](#) and [INSU](#). The CDPP is the French national data centre for natural plasmas of the solar system. The CDPP assures the long term preservation of data obtained primarily from instruments built using French resources, and renders them readily accessible and exploitable by the international community. The CDPP also provides services to enable on-line data analysis ([AMDA](#)), 3D data visualization in context ([3DView](#)), and a propagation tool which bridges solar perturbations to in-situ measurements. The CDPP is involved in the development of interoperability, participates in several Virtual Observatory projects, and supports data distribution for scientific missions (Solar Orbiter, JUICE).

New AMDA Release V1.3

13/02/2014

New data : ACE MAG and SWEPPAM
'real time' from NOAA

28/11/2013

The new AMDA is officially launched !

Information

- To plot a parameter, **drag** it from the Parameters tree and **drop** onto the panel
- Y2-axis** option is **not implemented** yet
- XY ('Scatter') PlotType takes into account only '**Symbol**' and '**Color**' parameter arguments
- If **AutoScale** mode is selected AMDA **ignores** all parameter arguments for 'AutoScaled' panels

Name*: Magnetic_Clouds

Creation date: 2013/11/22 13:52:50

Intervals: 106

Description: Magnetic Clouds from WIND/MFI 1995-2007 -- Estimated start and end times from a magnetic field model [Lepping et al., 1990] which assumes that the field within the magnetic cloud is force free, i.e., so that the electrical current and the magnetic field are parallel and proportional in strength everywhere within its volume -- see http://lepmfi.gsfc.nasa.gov/mfi/mag_cloud_pub1.html

Operation log: From old AMDA

Table of available data

- Flare Data, Carrington Maps, J-Maps, Solar Wind Speed

Supported set up

- Check browser/OS support
- Java requirements
- Get java 7.45
- Linux troubleshoot

What's new ?

- New J-maps will be available in February 2014

[Launch the Propagation Tool](#)

A new interactive tool accessible to the solar, heliospheric and planetary science communities to track solar storms, streams and energetic particles in the heliosphere

The propagation tool allows users:

- to propagate solar eruptions (CMEs) radially sunward or anti-sunward (Radial Propagation),
- to propagate corotating structures (CIRs) in the heliosphere (Corotation),
- to propagate solar energetic particles along magnetic fields lines sunward or anti-sunward (SEP Propagation),

The START and END points (defined by a right click on the ecliptic plane) can be the Sun, planets or probes situated in the interplanetary medium. The times of propagation between the START and END points are based on simple analytic calculations.

The added values of the tool are an easy access to unique datasets and a fast interoperability :

- it integrates the orbital elements (using SPICE) of probes and planets. This allows you to determine via simple clicks the position/orientations of imagers that you would like to consider,
- it offers web-service access to summary plots of in-situ data stored at the CDPP as well as movies of solar images stored at MEDOC,
- it provides access to a wide range of Carrington maps of the solar surface to visualize the location of active regions, coronal holes and solar flares on the Sun

The great novelty of the tool is the immediate visualisation and basic manipulation of maps of solar wind mass flows tracked continuously from the Sun to 1AU. These maps are called J-maps and are generated by extracting bands of pixels in coronal and heliospheric images along the ecliptic planes and stacking them vertically (along the ordinate) with time (along the abscissae). The maps are produced from teraocts of imagery data that are impossible to manipulate if you are not an expert in the field. The tool was designed to be user friendly and accessible to any scientist interested in locating CMEs/CIRs and particle fluxes in the ecliptic plane.

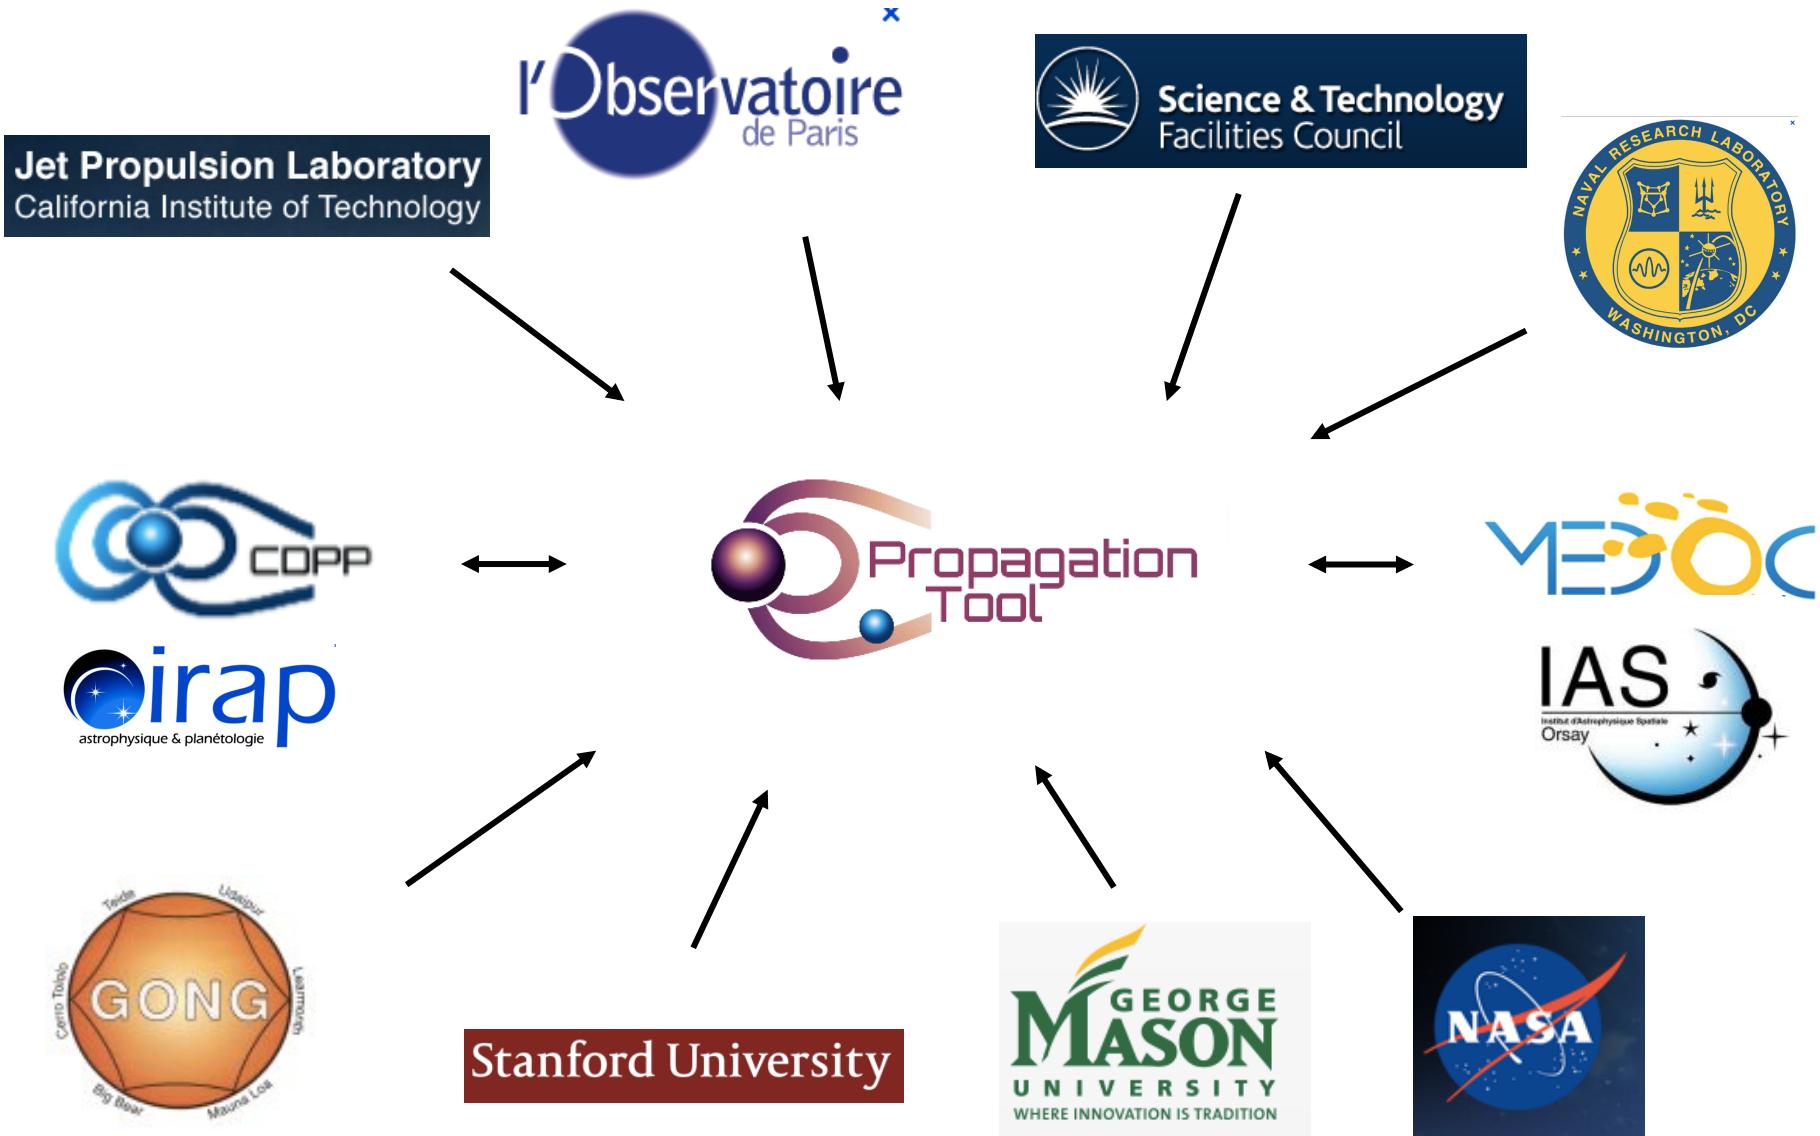

With the tool you can use these maps to:

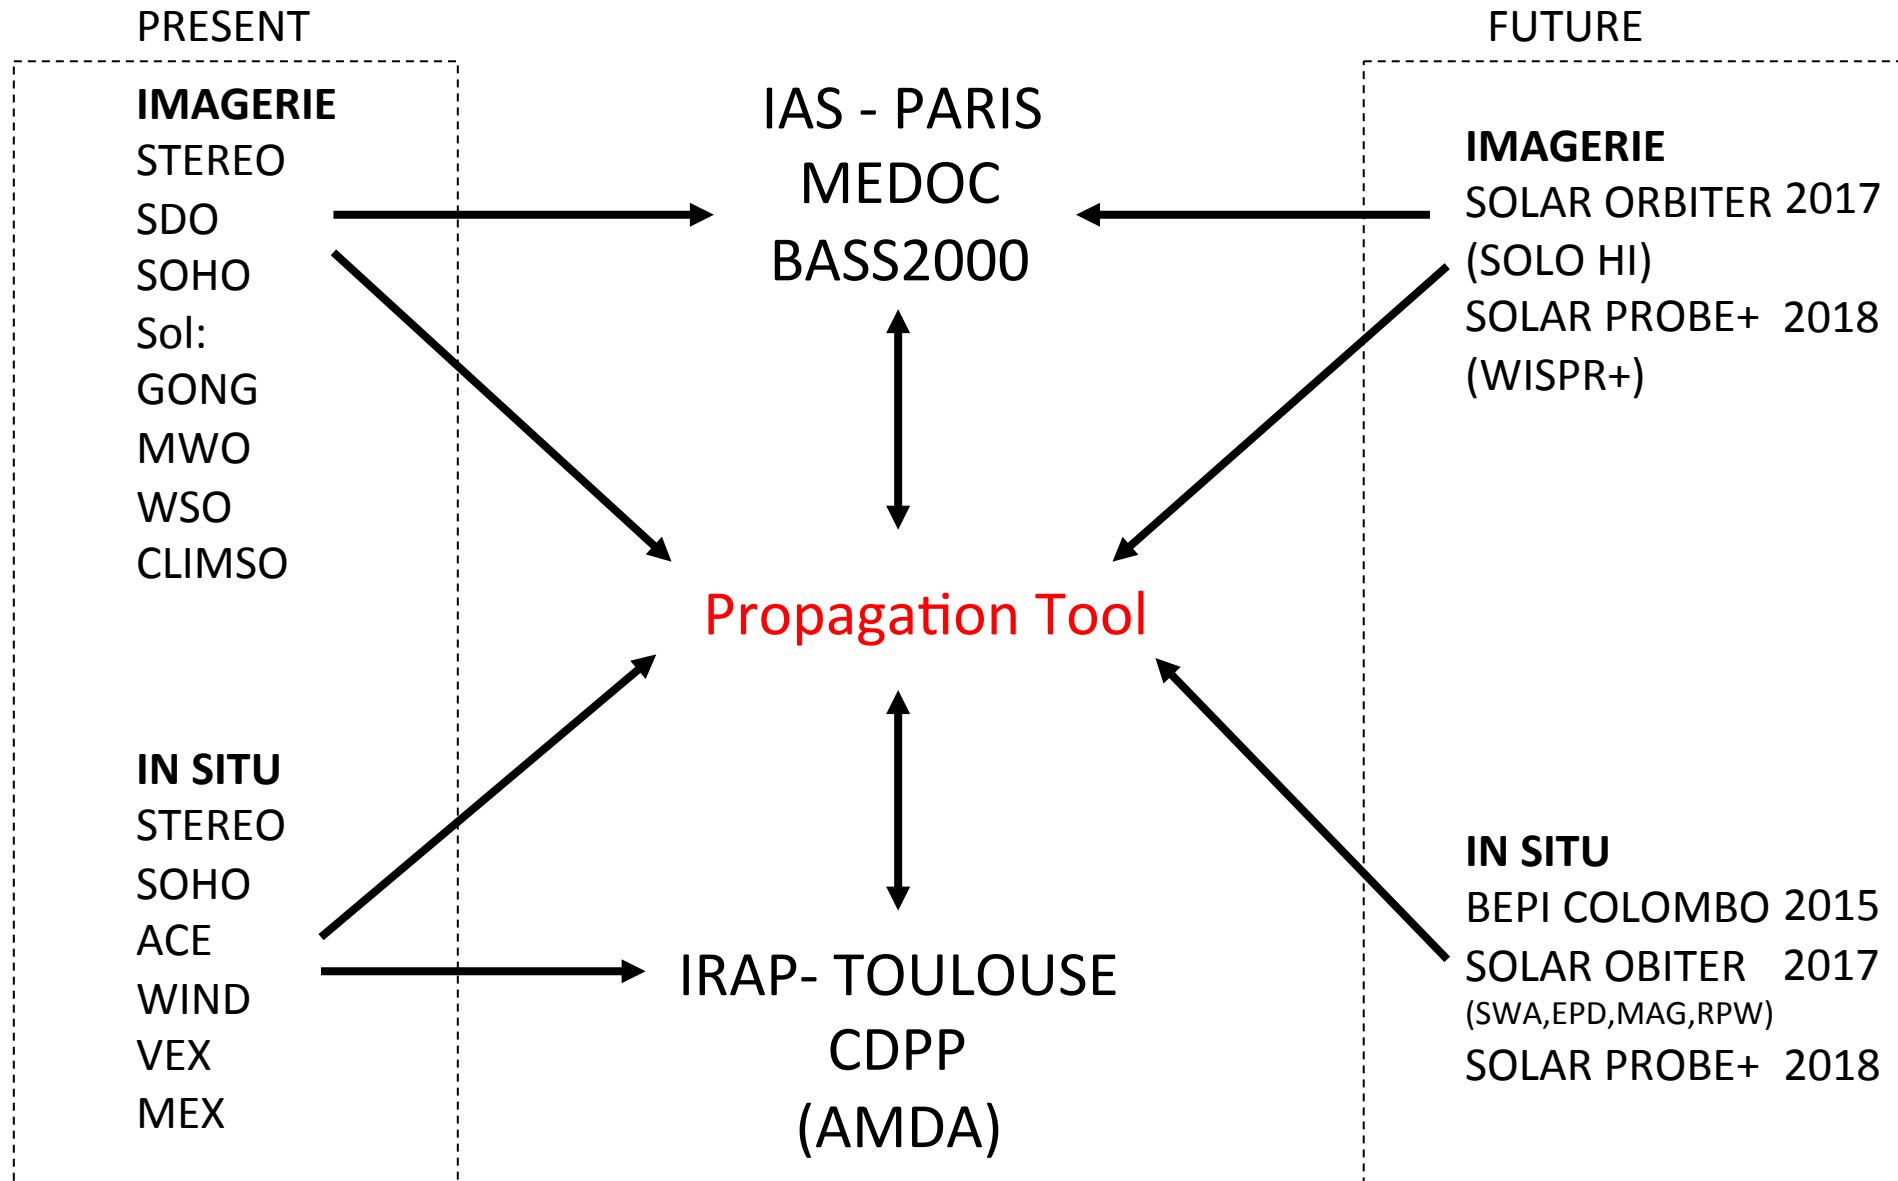

- cross check your ballistic calculation of CME/CIR propagations,
- carry out your own calculations of CME/CIR trajectories in the ecliptic plane via a few clicks on the map (simple use),
- use pre-calculated CME trajectories to check if a transient emerged from the Sun and impacted a planet or probe

The tool retrieves data from several data centers and data repositories:

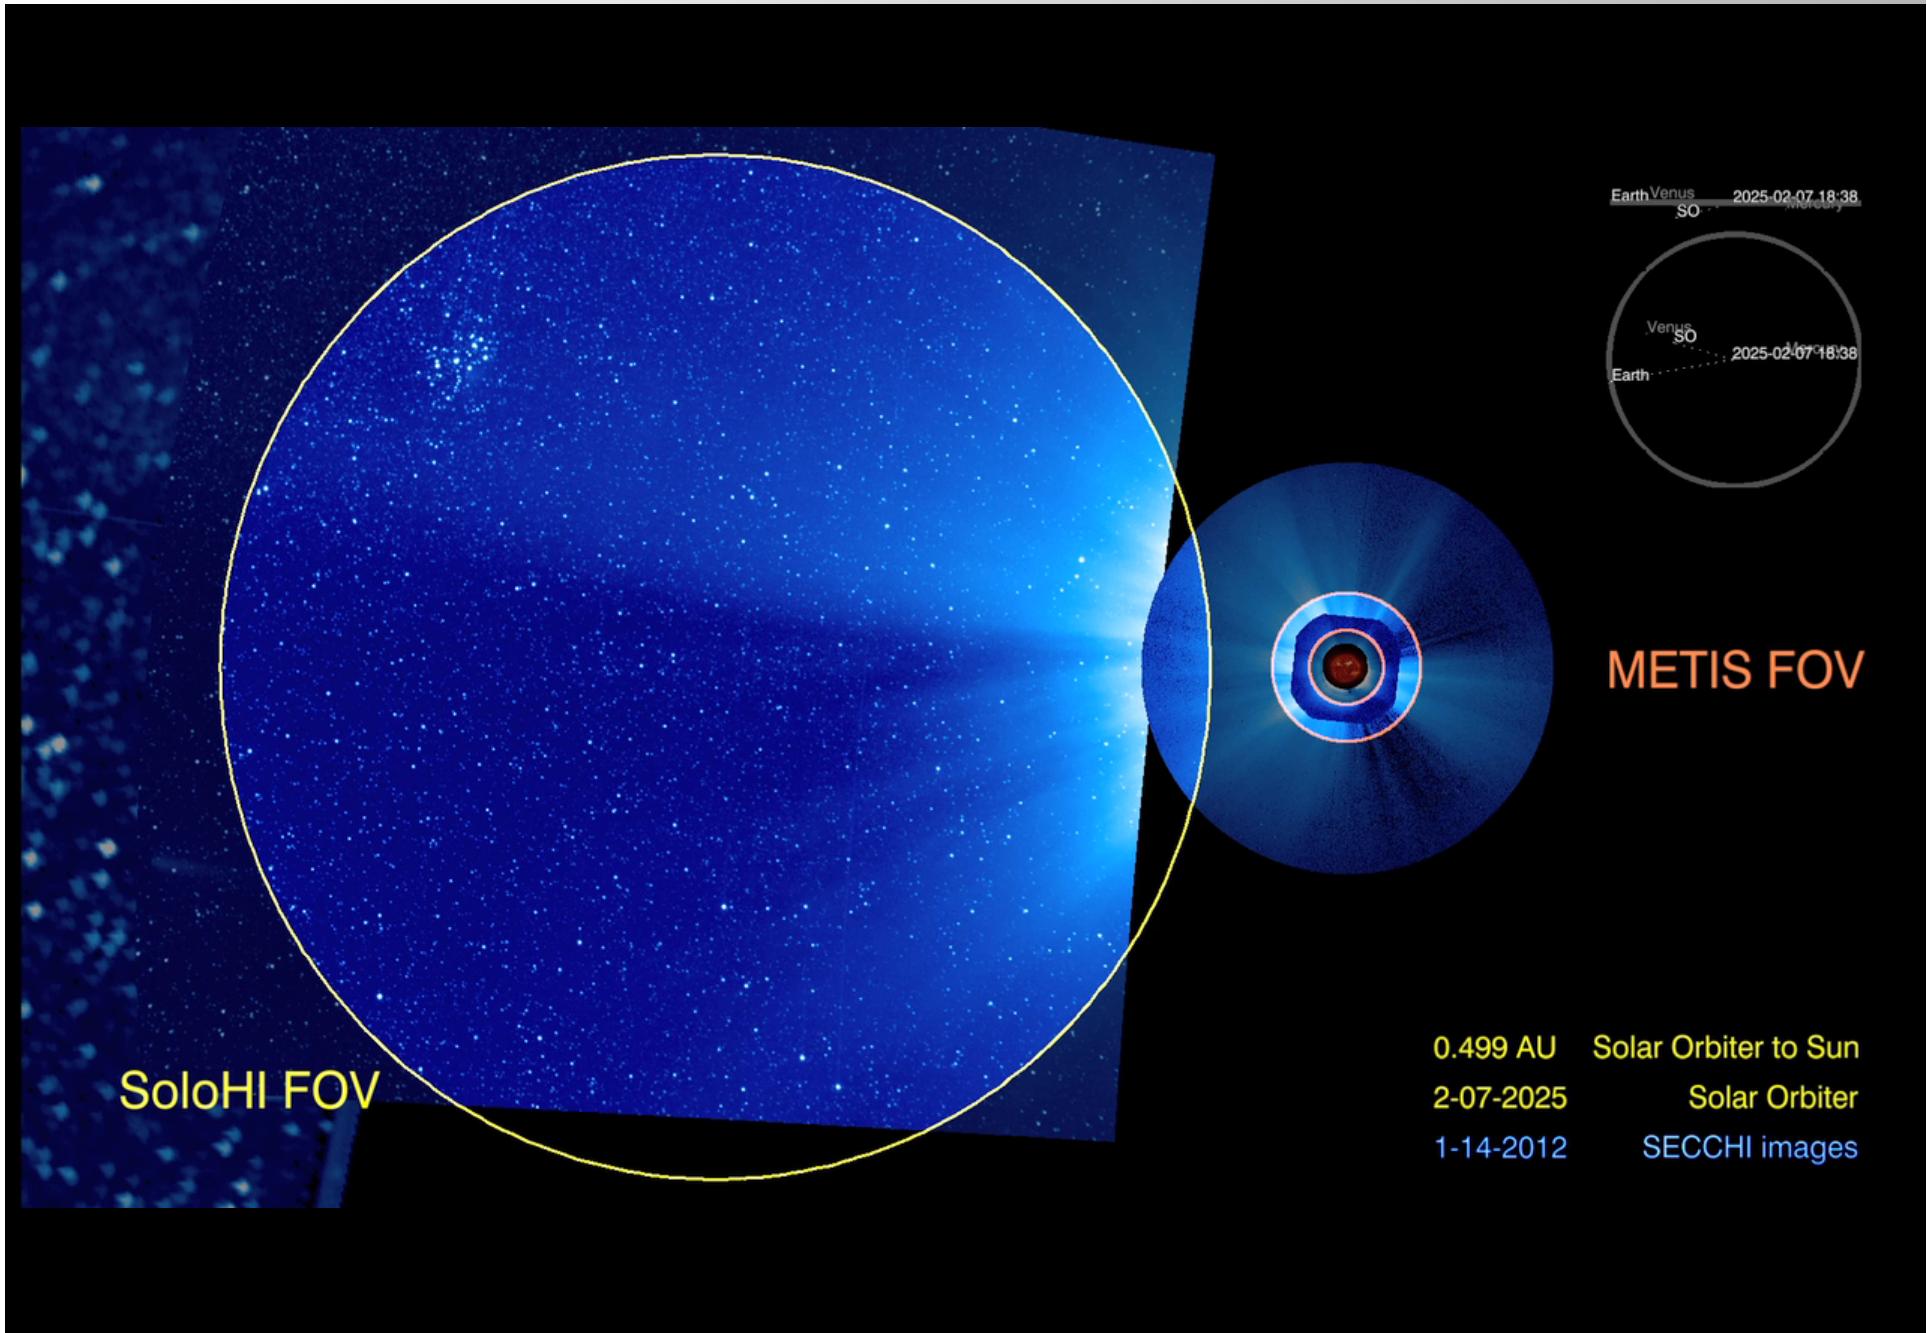

2020-01-31 09:00:00

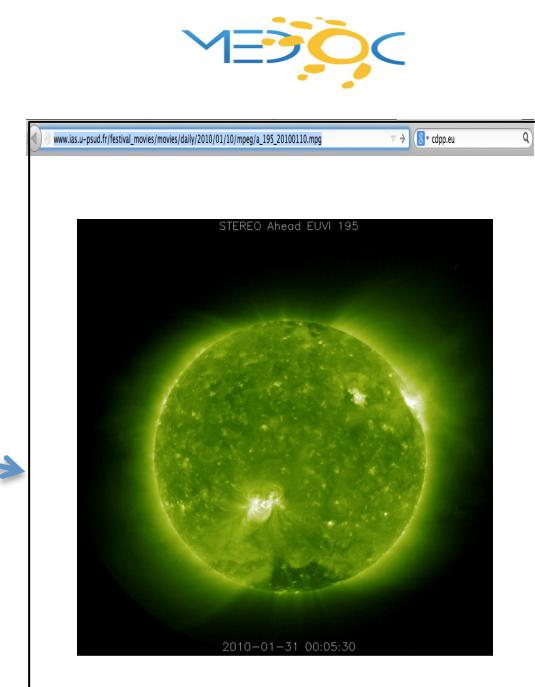

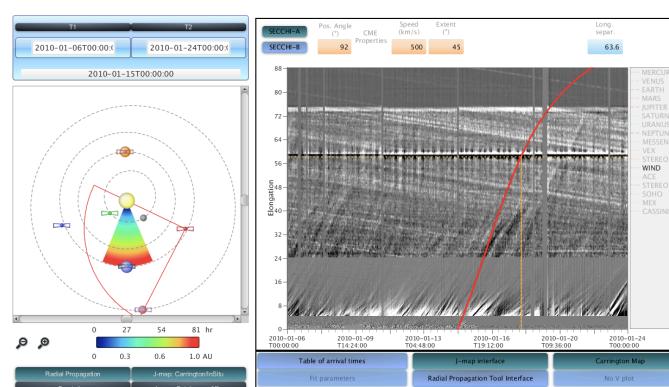

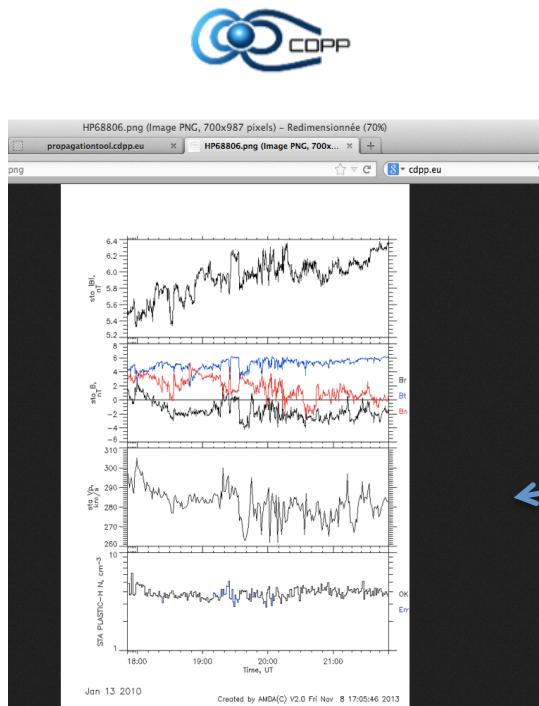

The link to the French plasma (CDPP) and solar image (MEDOC) data centers is via web-service:

- In situ datasets are accessed in a fixed format via AMDA (CDPP data mining tool),
- Solar (daily) movies are launched in your browser via the MEDOC data center

Release 2.0.2 - 15/10/2013

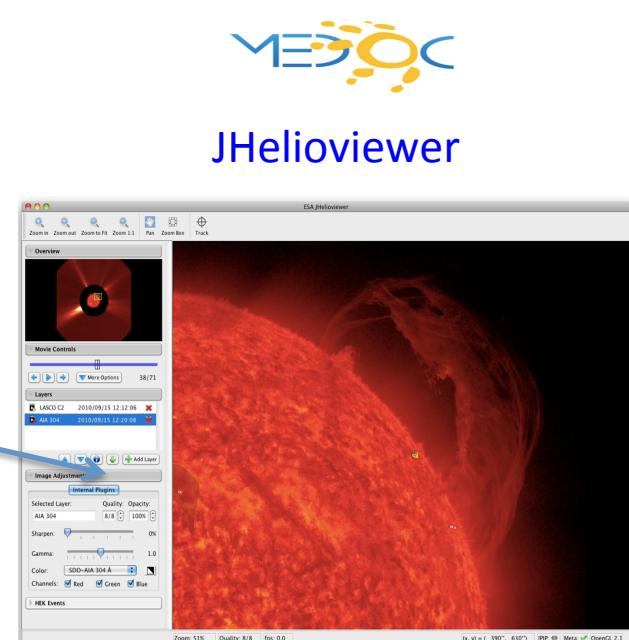

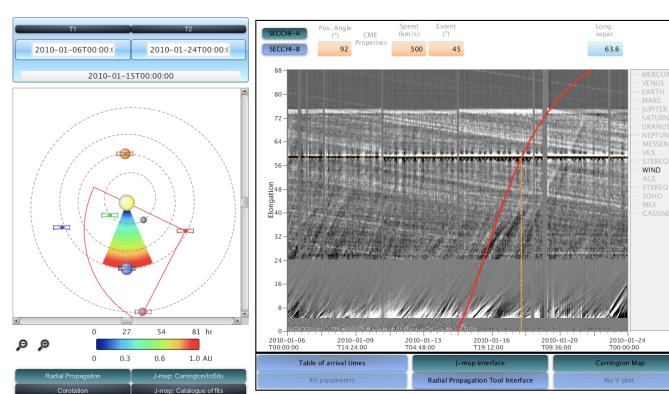

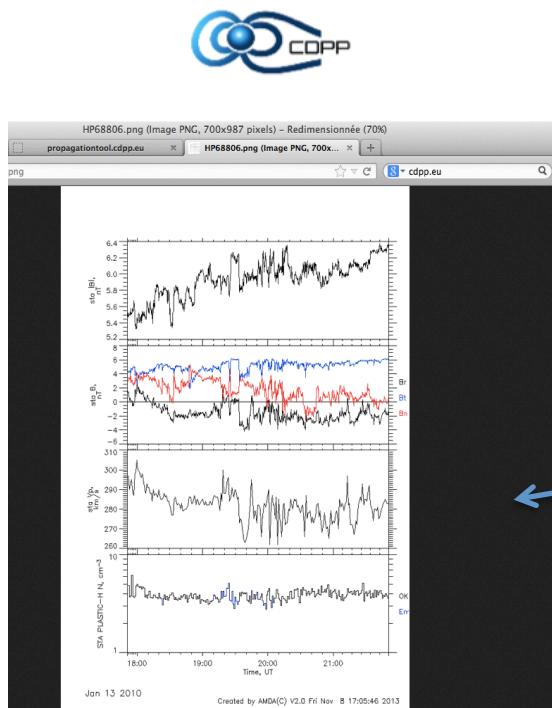

The link to the French plasma (CDPP) and solar image (MEDOC) data centers is via web-service:

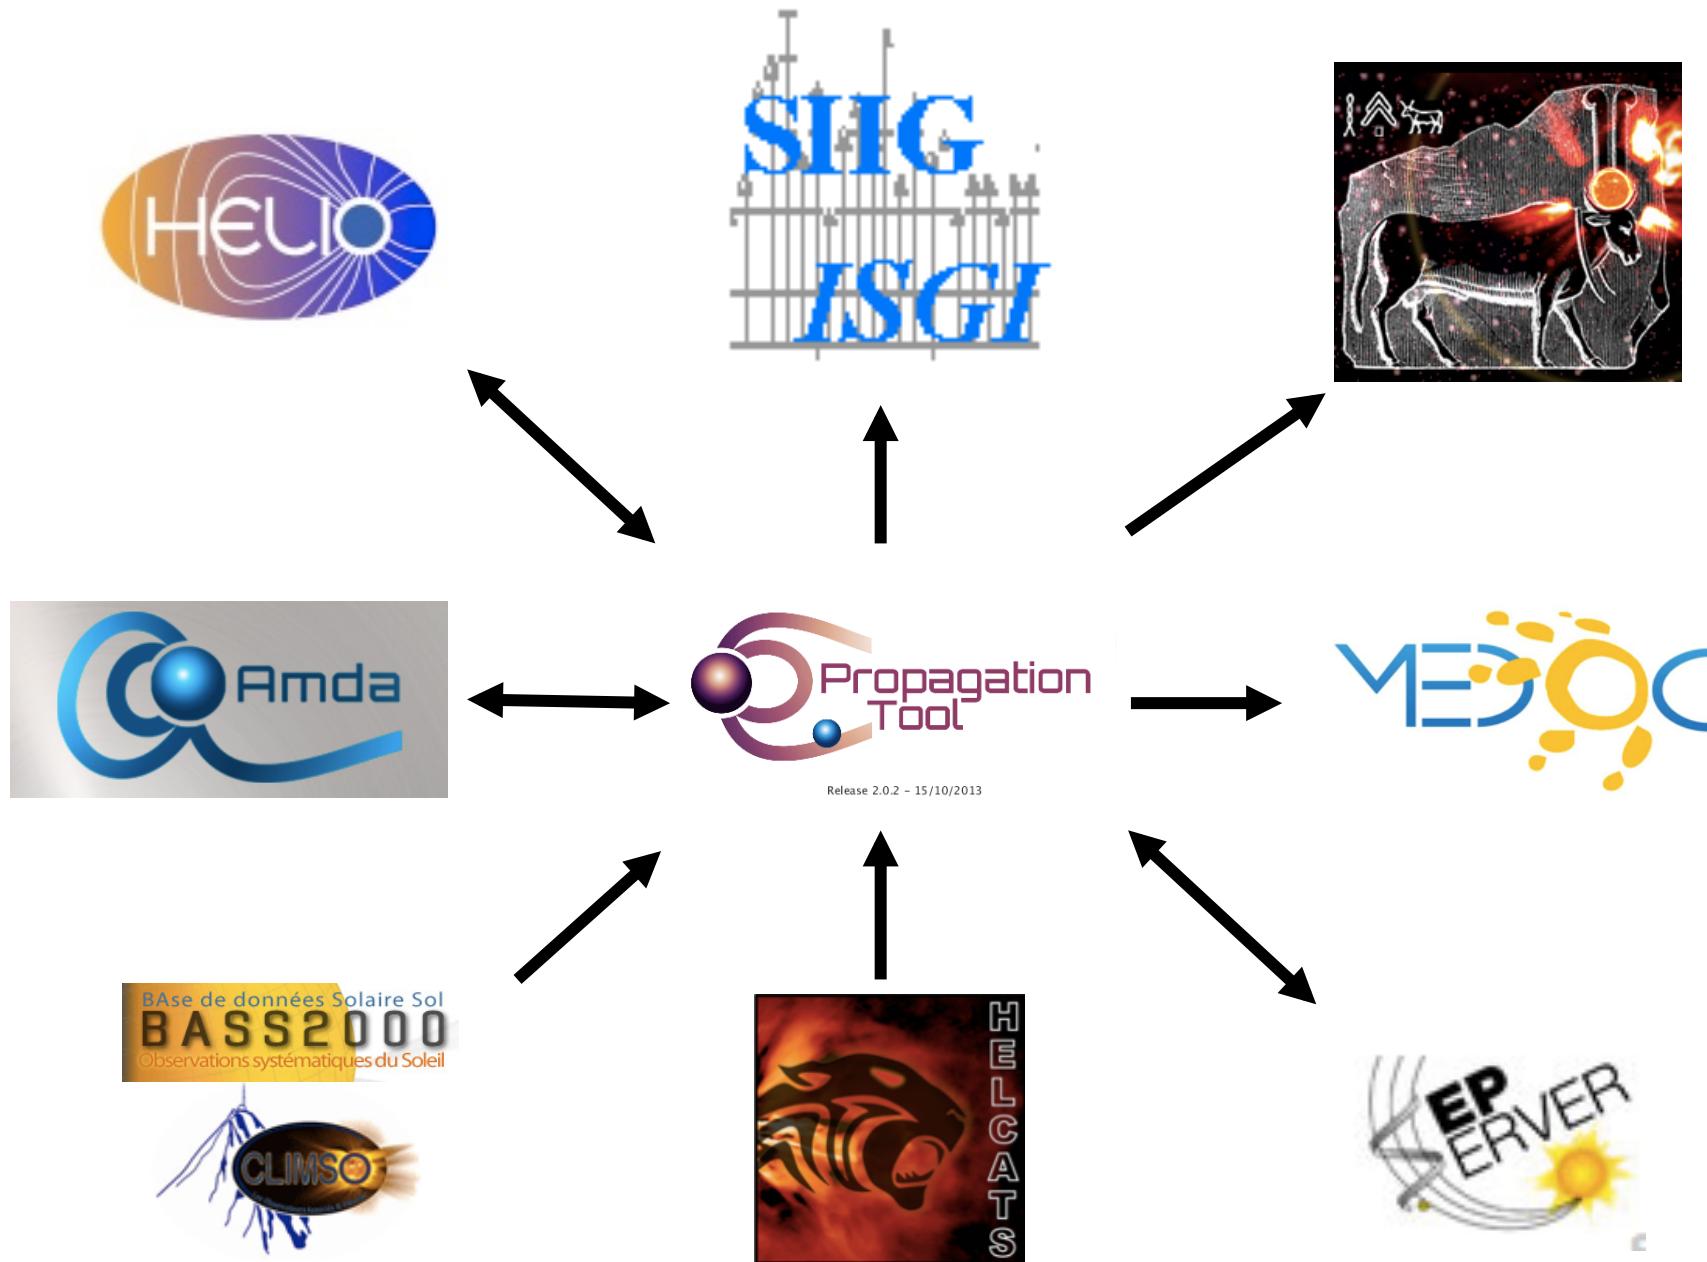

- In situ datasets are accessed in a fixed format via AMDA (CDPP data mining tool),
- Solar (daily) movies are launched in your browser via the MEDOC data center
